Mosquitos show no sign of West Nile

GLYNN COUNTY, Ga.- In response to the mosquitos that tested positive for West Nile virus, Mosquito Control Services of Georgia informed the households in the immediate area with approximately 100 door hangers, treated standing water in the surrounding area, and sprayed via truck on the evenings of July 20-22, 2018. Surveillance and testing on July 23-24, 2018, show that the disease-capable mosquitos were tested and returned with no sign of West Nile virus.

Mosquito Control Services of Georgia is continuing to monitor all of Glynn County for the presence of disease and will continue with their normal mosquito spraying schedule.
