Hurricane Dorian Update #4

GLYNN COUNTY, Ga.- The August 31, 2019, 6:00 p.m. projections do not show much change in the forecasted track of Hurricane Dorian. The storm has moved to the East and could skirt the Georgia coast. If this track continues, Glynn County will likely see tropical storm force winds on the immediate coastal area and greater impacts from storm surge and rain. This storm has been unpredictable and at this time the earliest possible effects from the storm could be experienced on Monday, September 2, 2019.

A coastal flooding advisory still applies. There are currently seasonally high tides and flooding is an issue due to storm surge and rain. This track could potentially cause over 5 inches of rain through Thursday in an area that is already soaked with rain from the current Nor'easter. The storm is currently causing hazardous marine conditions and rip currents.

For non-emergency calls, please use 912-554-3645 to free up 911 lines for emergency calls.

The College of Coastal Georgia has cancelled classes and will suspend all non-essential operations for Tuesday, September 3, 2019. Visit www.ccg.edu for updates

There are no other closures to announce at this time from the Glynn County School System, the City of Brunswick, Jekyll Island Authority, FLETC, Coastal Pines, or Glynn County. This includes the Sidney Lanier Bridge. The Georgia Department of Transportation could possibly close the Lanier bridge if sustained winds reach 45 mph.

Coastal Georgia is currently under a state of emergency. This declaration extends to commerce and the uninterrupted supply of petroleum products, emergency or disaster related materials, supplies, goods and services. **Glynn County has not declared a state of emergency.**

We will continue to monitor conditions and updates will be available at www.glynncounty.org and on the Glynn County EMA Facebook daily. We advise the public to use the latest forecast models from the National Weather Service Jacksonville to stay informed between updates.
